SOC 5050: Week 07 Equations Quick Reference

Christopher Prener, Ph.D.

October 3rd, 2016

Standard Error

$$\sigma_{\bar{X}} = \frac{\sigma_x}{\sqrt{n}} \tag{1}$$

Z-Score for Sample Means

$$z = \frac{\bar{x} - \mu}{\frac{\sigma}{\sqrt{n}}} \tag{2}$$

Simple Power Analysis

$$\left(\frac{1.96\sigma}{\Delta} \right)^2 \tag{3}$$

Use any of the two-tailed critical value's z-scores depending on how wide you want your interval.

Predictive Interval

$$(\mu - 1.96\sigma, \mu + 1.96\sigma) \tag{4}$$

Use any of the two-tailed critical value's z-scores depending on how wide you want your interval.

Predictive Interval for Sample Mean

$$\left(\mu - 1.96\frac{\sigma}{\sqrt{n}}, \mu + 1.96\frac{\sigma}{\sqrt{n}} \right) \tag{5}$$

Use any of the two-tailed critical value's z-scores depending on how wide you want your interval.

Confidence Interval for Sample Mean

$$\left(\bar{x} - 1.96\frac{\sigma}{\sqrt{n}}, \bar{x} + 1.96\frac{\sigma}{\sqrt{n}}\right) \quad (6)$$

Use any of the two-tailed critical value's z-scores depending on how wide you want your interval.

Document Details

Document produced by Christopher Prener, Ph.D. for the Saint Louis University course SOC 5050 - QUANTITATIVE ANALYSIS: APPLIED INFERENTIAL STATISTICS. See the course wiki and the repository `README.md` file for additional details.
